
RUSSTECHNICAL NOTES

SOLVENT-BASED OR WATER-BASED CURING AND SEALING COMPOUNDS?

Solvent-based is considerably better!

ADVANTAGES OF SOLVENT-BASED CURING & SEALING COMPOUNDS:

- ✓ **More resilient films over the concrete surface**
- ✓ **Better chemical resistance, particularly with de-icing salts**
- ✓ **Faster drying times, especially in cooler weather**
- ✓ **Much less water (or moisture) sensitivity**
- ✓ **Not affected by high humidity environments**
- ✓ **Higher quality acrylic resins used in solvent-based curing & sealing compounds**
- ✓ **VOC compliant under the new federal standards**
- ✓ **Available in dark and light brown pigments, in addition to clear**
- ✓ **Ask the concrete finishers what works best and they will say the “milky white stuff ” (water-based) does not work as well as solvent-based**
